Familiyasi	Yoshi

Bir ko'chada yashaydigan uch qizning ismi, familiyasi va yoshini pastdagi yechim kalitidan foydalanib toping.

Yechim kalitlari:

1. Familiyasi Zokirova bo'lgan qiz Zarifa ismli qizdan uch yosh katta.
2. Familiyasi Qodirova bo'lgan qiz 9 yoshda.

	Zokirova	Yusupova	Qodirova	7	9	10
Oysha	√	x	x	x	x	√
Xurshida	x			x		
Zarifa	x			√	x	x
7	x					
9	x					
10	√	x	x			

Topish usuli:

Familiyasi Zokirova bo'lgan qiz (1- yechim kaliti) Xurshida emas. Demak, Xurshida — Zokirova nomlari kesishgan katakka «X» belgisini qo'yasiz. 1- yechim kaliti uning Zarifa ham emasligini ko'rsatyapti. Binobarin, bu katakka ham «X» belgisini qo'ying. Demak, familiyasi Zokirova bo'lgan qizning ismi Oysha ekan, chunki faqat uning ismi belgilanmadi, xolos. Endi katakka «√» belgisini qo'yib, Oyshaning familiyasini ko'rsatuvchi barcha kataklarga «X» belgisini qo'ysa bo'ladi. Agar Oysha Zokirova Zarifadan uch yosh katta bo'lsa (1- yechim kaliti), Oysha 10, Zarifa 7 yoshda bo'ladi. Demak, Oysha-10, Zarifa-7 kataklariga «√» belgisini qo'ying va bu belgilarni o'z ichiga olgan har bir qator va ustundagi barcha bo'sh kataklarga «X» belgisini qo'ying.

Endi sxema Xurshidaning 9 yoshda ekanligini ko'rsatyapti. Binobarin, Xurshida-9 katagiga «√» belgisini qo'yishingiz mumkin. 2- yechim kalitiga ko'ra, Qodirova familiyasi qiz 9 yoshda ekan. Demak, uning ismi Xurshida. Qodirova-9 katagiga «√» belgisini va shu qator va ustundagi kataklarga «X» belgisini qo'ying, so'ng Xurshida Qodirova katagiga «√» belgisini va shu qator va ustunlardagi kataklarga «X» belgisini qo'ying.

Endi sxemaning qolgan bo'sh kataklariga «√» belgisi qo'yilishi kerakligini bilib olasiz, chunki bu bo'sh kataklar qatori va ustunlarida faqat «X» belgisi bor, xolos. Demak, 7 yoshdagi Zarifaning familiyasi Yusupova ekanligi ma'lum bo'ladi. Shunga ko'ra:

Oysha Zokirova 10;
Xurshida Qodirova 9;
Zarifa Yusupova 7.

	Zokirova	Yusupova	Qodirova	7	9	10
Oysha	√	x	x	x	x	√

KATAK BO'YASH

O'YIN QOIDASI

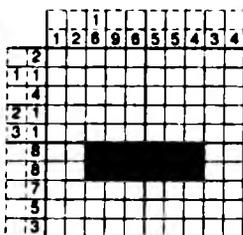

Har bir qatorning chap tomonida va har bir ustunning tepasidagi sonlar tartibi uning to'g'risida nechta qora katak guruhi bor ekanligini hamda har guruhda nechta qora katak yonma-yon joylashgan (ya'ni birlashib ketgan)ligini ko'rsatadi. Masalan, 4 5 9 2 raqamlari ichida yonma-yon joylashgan 4, 5, 9 va 2 qora katak bo'lgan to'rt guruh borligini bildiradi. Bu raqamlarning alohida berilganligi guruhlar orasida hech bo'lmaganda bitta bo'sh katak borligini ko'rsatadi (qator va ustunlarning boshi va oxirida ham bo'sh kataklar bo'lishi mumkin, albatta).

Jumboq — qora katak guruhlarining orasida nechta bo'sh katak bo'lishi kerakligini hisoblashdadir. Boshlash uchun yechim yo'li — yechim kalitini ko'rsatamiz: bir qatorda faqat bitta raqam mavjud bo'lsa va bu raqam uning to'g'risidagi katak sonining yarmidan katta bo'lsa, yanada ko'proq markaziy kataklarni bo'yashingiz mumkin. Pastda berilgan 10 katak kattaligidagi namunada (1- shakl) oltinchi va yettinchi qatorlarning har birida 8 raqami bor. Sakkizta qora katakni yonma-yon shunday joylashtiringki, o'rtadagi olti katak bo'yalsin (2- shakl).

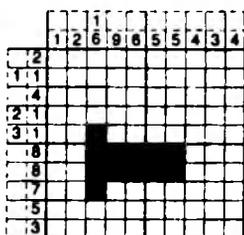

Ko'p sonni o'z ichiga olgan qator va ustunlarni ham shunga o'xshatib bo'yash mumkin. Namunada uchinchi ustunda 1 va 6 raqamini ko'ramiz. Yagona qora katak bilan uning orqasidagi bo'sh katak 6 ning ustida eng kamida ikkita katakni egallaydi. Qanday joylashtirilishidan qat'iy nazar, ustunning beshinchidan sakkizinchisigacha bo'lgan kataklari qora bo'ladi (3- shakl). 4- shaklda tugallangan rasm ko'rsatilgan.
